Radisson Blu Hotel Belfast

The Radisson Blu Hotel Belfast is one of the hallmarks of modern Irish hospitality. Its picturesque location in the historic Gasworks district, just a few minutes from the center, makes it an ideal starting point to explore Northern Ireland's capital. 120 rooms and suites, restaurants and event rooms welcome tourists and business travelers from around the globe. The Radisson Blu Hotel attaches great importance to making hotel guests and visitors feel at home. This also means that the arrival and departure experience should be as comfortable as possible. As would be expected for such a modern hotel, the parking management should therefore also make the winning first impression of a special location.

Project description

The car parks and their management are important components of the hotel operations for the Radisson Blu Hotel. Above all, it must be easy to use, maintain and manage. For the implementation of their requirements, the operator engaged Advanced Parking Solutions Ltd. The company provided them with a customized and cost-effective solution that will also meet future requirements - the SKIDATA solution.

Advanced Parking Solutions Ltd. is the first company in Ireland to provide this kind of technology, which also can be smoothly integrated into the SKIDATA parking system. The hotel benefits not only from reduced costs related to the handling of cash, but also from a significant drop in effort by the reception staff for guests who pay no fee. All this while increasing customer satisfaction at the same time.

From cashless payment to meaningful and informative reporting

The car parks convince guests right from the start: Simply insert your card into the “Dip and Go” chip and pin / debit card reader or wave your card in front of the “Wave and Go” contactless chip and pin reader and then you are on your way – so quickly opens the barrier and so convenient are the cashless payments. The same goes for contract parkers, who recharge their weekly, monthly or annual pass right at automatic terminal.

The hotel management is pleased to have the current, detailed reports provided as a SKIDATA standard feature. At the touch of a button, the various reports break down sales, show capacity utilization or preferred payment methods, and much more. This facilitates planning and also makes short-term promotions possible.

Welcome to the Radisson Blu Hotel Belfast!

Facts and Figures

Customer Radisson Blu Hotel Belfast

Installation Date September 2014

Capacity / Size Car park 1 – 100 parking spaces
Car park 2 – 125 parking spaces
